WORK EXPERIENCE

Software Engineer

April 2025- January 2026

Mayan Technologies

Allen, TX

Tech: NodeJS, Express, ReactJS, NextJS, MySQL, MongoDB, CronJobs, APIs, ChakraUI, Jira, CI/CD workflows.

- Developed full-stack features for a specialty healthcare EHR supporting allied health providers, building secure payment processing, appointment scheduling, and product sales modules that served 15+ practitioners.
- Built a comprehensive refund management feature integrating Stripe API, handling partial and full refunds, transaction tracking, and automated reconciliation, eliminating manual credit reconciliation processes.
- Diagnosed and resolved critical performance bottlenecks causing slow application response times, optimizing inefficient MySQL queries that reduced API response time by 70% and improved user experience for patients and practitioners 3.5s to 207ms.
- Strengthened API security by implementing authentication and authorization middleware across endpoints, preventing unauthorized access to sensitive patient information.
- Designed and implemented a real time KPI dashboard.. Enabling management to identify trends, prioritize debt recovery, and reallocate resources.
- Improved cronjobs to synchronize clinical correspondence with Docman Connect, ensuring healthcare providers had real-time access to patient documents and maintaining data consistency across the EHR system, validating improvements through Kafka events.
- Maintained CI/CD workflows with Git-based version control and implemented security best practices within 3-tier architecture.
- Integrated DocuSign eSignature API into external application using C# and JWT authentication, enabling automated document signing workflows and reducing manual signature processing time.
- Monitored and supported remote access workstations by troubleshooting system issues, installing applications, and configuring software to support team members accessing shared resources.
- Develop custom ERP client solutions, including BAQ reports and tailored functionality for a range of clients, including ITAR-regulated organizations, to address specific business needs and improve operational insights.

Web Developer

July 2024 - April 2025

SWITECH

Allen, TX

Tech: ReachJS, Bootstrap, Astro, Figma, Vercel.

- Addressed clients' need for optimized web presence by designing and deploying responsive websites improving user engagement and enhanced cross-device usability.
- Bridged business and technical requirements by partnering directly with business owners to translate needs into high-performance web solutions, ensuring alignment with user expectations.
- Deployed client websites through GitHub-integrated Vercel workflows for automated builds and production deployments.

Computer Science Tutor

Dec 2022 - July 2024

Superprof

Remote

Tech: Java, C++, Javascript.

- Provided individualized instruction to 10+ students in Java, JavaScript, and C++, emphasizing core programming principles through hands-on coding exercises and collaborative pair programming sessions.
- Designed and implemented a tailored curriculum focused on Software Development Life Cycle (SDLC) best practices, resulting in a 35% improvement in student code quality metrics.

Software Engineer Co-Op

May 2022 - Oct 2022

Motorola Solutions, Inc,

Allen, TX

Tech: ReactJS, OAuth 2.0, Jira API, Node.js, Express, Azure Pipelines, fundamentals of Docker and Kubernetes.

- Unified project data from multiple sites by developing a centralized React dashboard with OAuth 2.0 authentication integrating Jira API, providing real-time project visibility.
- Improved deployment efficiency by optimizing AzurePaaS CI/CD pipelines with YAML configurations, reducing deployment time and streamlining the release process.
- Solved slow data retrieval and poor user experience by building responsive Bootstrap front-end interfaces, which improved page load performance and enhanced data interactivity.
- Optimized Docker image lifecycle management by systematically removing stale images, improving build efficiency and reducing infrastructure overhead.

- Completed FedRAMP compliance training covering security controls, authorization requirements, and industry best practices for services handling federal government data.

PROJECTS

Full Stack Developer

DSD-COHORT | Dental Practice Management System (EHR)

Tech: NextJS, TypeScript, Tailwind CSS, ExpressJS, JWT, Linux, Figma.

- Addressed scalability limitations by architecting a multi-tenant EHR platform using Next.js and Express.js, enabling seamless support for multiple dental practices from a single codebase.
- Solved fragmented patient data management by developing RESTful APIs with Express.js for appointment scheduling, treatment tracking, payment processing, and product sales, centralizing clinical and administrative workflows for dental practitioners.
- Enhanced security by implementing JWT-based authentication and authorization in Express.js, protecting sensitive patient health information and ensuring role-based access control across the platform.
- Improved user experience by designing responsive wireframes in Figma and implementing a modern front-end interface using TypeScript and Tailwind CSS, reducing appointment booking time and streamlining administrative tasks for dental staff.

February - March 2025
Plano, TX

Full Stack Developer

DSD-COHORT | Grocery Inventory Management System

Tech: ReactJS, Javascript, Tailwind CSS, NodeJS, PostmanAPI, Figma.

- Solved the daily challenge of meal planning and food waste by developing a full-stack React application that suggests 100+ recipes based on available ingredients and automatically generates grocery lists for meal prep, reducing decision fatigue and shopping time.
- Developed seamless recipe discovery by integrating a third-party recipe API to provide preparation instructions and nutritional data, designing a MongoDB backend to efficiently store API responses and custom user preferences.
- Addressed meal planning inefficiency by building an intelligent ingredient-matching algorithm that recommends recipes from available pantry items, helping users reduce food waste and streamline weekly meal preparation.
- Collaborated across the full software development lifecycle using Kanban methodology, delivering iterative features from requirement analysis through deployment, ensuring timely visibility of milestones and solution implementation.

March - April 2024
Plano, TX

EDUCATION

Fort Hays State University

Bachelor Degree of Science in Computer Science and Information Systems Engineering.

• Delivered Full Stack projects using Java, JavaScript, PHP, C++ with 100% on-time completion rate and deployed on Heroku and Netlify.

June 2019 - Completed Dec 2022

SKILLS

• JavaScript	• MySQL	• Linux
• TypeScript	(Sequelize)	• Git/GitHub
• SQL	• MongoDB	• APIs
• Node.js/Express	(Mongoose)	• OAuth 2.0
• React	• CI/CD	• JWT

CERTIFICATIONS

- Cloud Foundations Epicor
 - Claude 101
- Claude Code
 - AI Fluency
